<td>0.7</td>
<td>0.88</td>
<td>(0.18)</td>
<td>(20.5)</td>
<td>Fewer complications</td>
</tr>
<tr>
<td>Core measures score (%)</td>
<td>87.47</td>
<td>85.47</td>
<td>2</td>
<td>(11.9)</td>
<td>Better performance</td>
</tr>
<tr>
<td>CHF core measures mean percentage</td>
<td>93.25</td>
<td>89.38</td>
<td>3.87</td>
<td>(4.2)</td>
<td>Better performance</td>
</tr>
</tbody>
</table>

Note: Data are as of federal fiscal 2007. Median values reflect rounding. **1**: tighter than greater than 1 standard national norms; **2**: less than 1 SD below national norms. AMI—acute myocardial infarction, CHF—congestive heart failure, CABG—coronary artery bypass graft, PCI—percutaneous coronary intervention
